

AUDIOMAXX_

MAXIMIZE: maximizes the audio signal to increase the perceived audio volume. The display shows the percentage of the level of maximizing.

GAIN: Adjusts the input gain. Decrease it if the sound is distorted.

ON: Enables or bypass the plugin.

GEAR: show the info panel

ALGORITHM TYPE: selects one of three operating modes.

LIMIT: change the mode of the audio limiter.
Soft: the limiter threshold is higher for a more natural sound but with a high gain distortion as possible.
Hard: the limiter threshold is lower with a fast attack to make the mix more compressed.

WAVEFORM: show the audio waveform of processed signal. Select the memory size to visualize with + or - button.

INFO PANEL_

Insert the serial number on white label, double click on SAVE/OK. If the serial nurmer is correct, the status change in to: REGISTERED.

CLOSE: to return to plugin interface.

NOTE: the plugin introduce some latency. Use bypass funtion when you edit the song.
