

**DHS Startup 1.0**  
**By Andres J. Bermudez, EMT-B**  
**Bermudez Computer Consulting**

**READ ME AND LICENSE AGREEMENT**

DHS Startup is a very basic AppleScript to check the current US Department of Homeland Security Threat Advisory Level. It checks the threat level directly from the DHS web site

DHS Startup will display a dialog with the current threat level and color and will beep depending on the threat level (five beeps for Severe, four for High, etc).

It is best when set as a login item (in your systems preferences) so it will run every time you login. Advanced users can run it using cron so it will run regularly.

DHS Startup comes with  
NO WARRANTY, EXPRESSED OR IMPLIED OF ANY SORT  
bug reports are welcome at [dhs\\_startup@bermudez.cc](mailto:dhs_startup@bermudez.cc)
