

PROJECTMAKER

Thank you for taking the time to demo our product.

ProjectMaker 2.5 Demo for Windows

This file contains installation instructions and additional information regarding the ProjectMaker Demo:

- 1. About ProjectMaker**
- 2. Installing ProjectMaker Demo**
- 3. Registering ProjectMaker**
- 4. ProjectMaker Tutorial**

1. ProjectMaker Pro is a multi-user business system designed for the Special Event Industry. Based on FileMaker Pro, it is easy to learn, intuitive to use and simple to maintain. It offers built in remote access, multi level security and password admission in a cross-platform, server based environment. This Demo is based on ProjectMaker Personal Edition. Personal Edition offers all of the features of our FileMaker Pro version in a single user setting and does not require FileMaker Pro to operate.

Your Personal Edition data can be easily converted to our multi user system as you build your business. Additionally this Demo Version of ProjectMaker can be authorized via email after payment and will become a full version of Personal Edition. We think you will be pleased with the intuitive interface and impressed with its functionality. This is the XP version of our Cross Platform software. Please do not install this on a Mac. We are happy to get the OS X version to you.

2. To install this 30 day demo version, move (copy) the ProjectMaker Folder onto your hard drive- not your desktop. Inside the ProjectMaker Demo Folder you will find the ProjectMaker Icon. Double click on the ProjectMaker Icon and follow the password prompts.

3. Other than the 30 day time limit, this is a fully functional

product.

Since it is designed for a single user, you are automatically logged in at the highest security level. The Pro version has options for 4 different security levels. All information that you enter can be used immediately upon changing this Demo into the Personal Edition

Please contact us about running your business better with ProjectMaker.

4. Please read the ProjectMaker Tutorial file "Getting Started" also in this folder. It offers a "walk through" to help you build your first project.
